

DC Feedthrough Filter

- IEC/EN 60939 approval

- Rated currents from 10 to 200 A

- 2.5 kV pulse test capability

- Class Y4 capacitor

Approvals & Compliances

Feedthrough filters offer a high insertion loss across a broad band of frequencies from a few tens of kHz up to the GHz region. In general feedthrough filters offer a higher level of EMI suppression than feedthrough capacitors of the same current rating. This is particularly relevant to applications where source impedance is smaller than 50 Ω. Different versions are available offering a wide selection on operating currents and performance levels. DC feedthrough filters are designed and approved for 130 VDC/130 VAC 50/60 Hz operation.
