Single-phase EMC Filter for Control Equipment

Filter for the control line of complex equipment and machinery
To ensure interference-free operation of control equipment (PLC, Motion-, Robot Control etc.)
To improve operational reliability and system stability
Compact EMC filter design with minimum space requirement

Technical specifications

- **Maximum continuous operating voltage**: 250 VAC
- **Operating frequency**: DC to 400 Hz
- **Rated currents**: 6 to 16 A @ 50°C
- **High potential test voltage**: P/N -> E 2250VDC for 2 sec
  P -> N 1100VDC for 2 sec
- **Protection category**: IP 20
- **Overload capability**: 4x rated current at switch on,
  1.5x rated current for 1 minute, once per hour
- **Temperature range (operation and storage)**: -25°C to +100°C (25/100/21)
- **Flammability corresponding to**: UL 94 V-2 or better
- **Design corresponding to**: UL 1283, CSA 22.2 No. 8 1986, IEC/EN 60939
- **MTBF @ 50°C/250 V (Mil-HB-217F)**: 1,300,000 hours

Features and benefits

- An additional filter for the supply cables of controls of rather large and complex systems, to ensure a reliable operation of the control unit.
- To achieve significant system stability improvement by reducing the risk of internal interference propagation and coupling.
- FN 2415 B version without leakage current (0 mA)
- FN 2415 L version with leakage current of less than 3.5 mA.
- Simple and time-saving installation with good accessibility for automatic and hand tools
- Solid, touch-safe terminal blocks offering sufficient contacting cross section according to the EN 60204-1 installation standard
- By providing a very decent attenuation performance, FN 2415 contributes significantly to the achievement of electromagnetic compliance, e.g. EN50370-1 standards for machine tools.

Typical applications

Ideal for industrial equipment, machinery and diverse process automation systems, which involve any kind of control units (NC, CNC, Motion- and Robot Controls).

Large and complex machine tools with multiple driving axes and very long motor cables can be subjected to major reliability problems, provoked and by internal coupling of interferences from the drive system to the control wires.

This can cause drop outs and interrupts of the control unit and consequently lead to unnecessary downtimes of the entire machine. FN 2415 can also be used for most diverse single-phase applications, e.g. motor drives and power supplies.

</tbody>
</table>

* Maximum leakage under normal operating conditions (acc. to IEC60939-3). Note: if the neutral line is interrupted, worst case leakage could reach twice this level.
** Tolerances apply: Inductance: -30%/+50%, Capacitance: ±20%, Resistance: ±10%
*** Value of both inductors in the same group.

### Typical filter attenuation

Per CISPR 17; DM (differential mode) =50 Ω/50 Ω sym; CM (common mode) =50 Ω/50 Ω asym
