Compact 690 VAC power line EMC/EMI filter

- High current 3-phase filter up to 2300 A
- Extremely compact and light weight design
- Minimum installation foot print
- Performance optimised for standard purpose applications
- FN 3310 HV series without Cy capacitors to ground
- FN 3311 HMT versions for use in IT power networks

The FN 3311 HV/FN 3310 HV product series of standard EMC/EMI filters are based on Schaffner’s many years of expertise in filter design for all types of converter and inverter applications. Installed between the PV inverter and the power grid, the FN 3311 HV and FN 3310 HV AC filters are used to influence positively the conducted emissions on the grid side to help to comply with the required emission standards.

Features and benefits

- The FN 3311 HV/FN 3310 HV series are the most compact dedicated high current AC filters, not only suitable for PV applications, but being an optimum fit with most modern PV inverter topologies. In addition the filters can be configured in a very flexible way to fulfill custom specific application requirements.
- All FN 3311 HV/FN 3310 HV come in unsymmetrical housings, which help to prevent inverse installation and wrong electrical connection. The AC filters FN 3311 HV/FN 3310 HV are key to meet the stringent international standards for electromagnetic compatibility and help to ensure a reliable and fault-free operation of the entire PV system.

Typical applications

- The FN 3311 HV/FN 3310 HV series are primarily designed for all kind of power line connected converter and inverter applications between 250 and 2'300 A. However, they are optimised for PV inverter and can potentially also be applied for general purpose motor drives applications.

Typical electrical schematic FN 3311 HV

- FN 3311 HMT series without resistor to PE
- FN 3310 HV series without resistor and capacitor to PE

* Filters with higher current ratings available upon request.
** Filters with reduced Cy capacitance to ground for high asymmetrical currents and higher voltages available upon request.
*** Calculated at rated current, 690 VAC and cos phi = 0.8. The exact value depends upon the efficiency of the drive, the motor and the entire application.
**** Leakage current according IEC 60939-1

Typical filter attenuation curves
Per CISPR 17; A=50 Q/50 Q sym; B=50 Q/50 Q asym

Important note: depending on the grounding scheme of the solar power system, including the solar panel and the grid side transformer, the appropriate DC- and AC EMC/EMI filter version need to be selected. For support, please contact your local Schaffner sales office or partner.
Note: all FN 3311 and FN 3310 provide unsymmetrical mounting hole patterns to prevent inverse filter installation in the field.

Dimensions of FN 3311 HV and FN 3310 HV series

(the FN 3311 HVIT versions have the same dimensions as the FN 3311 HV)

All dimensions in mm; 1 inch = 25.4 mm
Tolerances according: ISO 2768-m/EN 22768-m, if not stated otherwise

Please see the brochure “Basics in EMC and Power Quality” on our website www.schaffner.com to find more details on filter connectors.
