Ecosine 50 Hz Passive Harmonic Filters

The industry standard for 6-pulse rectifiers and motor drives
The most compact 5% THID filter available
Excellent behavior under partial load conditions
Filters for diode rectifiers

Ecosine filters reduce RMS input and peak current by reducing harmonic currents and improving true power factor.

* System requirements: THVD <2%, line voltage unbalance <1%
Note: performance specifications in this brochure refer to six-pulse diode rectifiers.
** Ecosine filters reduce RMS input and peak current by reducing harmonic currents and improving true power factor.
*** Overload capability is derated = \( \frac{I_{\text{nominal}} \times (T_{\text{max}} - T_{\text{amb}})}{5\, ^\circ C} \) \( \times 5\, ^\circ C \)
**** External UL-rated fuses required. Please consult the user manual.

Features and benefits

Schaffner ecosine harmonic filters represent an economical solution to the challenge of load-applied harmonics mitigation in three-phase power systems. With a plug-and-play approach and more compact dimensions than comparable products, they can be quickly installed and easily commissioned. They increase the reliability and service life of electric installations, help utilize electric system capacity better, and are the key to meet Power Quality standards such as IEEE 519. ecosine filters calm your harmonic waves. Schaffner ecosine filters can be applied to virtually any kind of power electronics with front-end six-pulse rectifiers, where harmonic current distortion needs to be reduced to defined limits. Typical applications, where the above-mentioned non-sinusoidal consumers of power can account for a significant portion of the load, include:

Typical applications

- Equipment with front-end six-pulse rectifier
- Motor drives
- Factory automation equipment
- Water/wastewater treatment facilities
- Fan and pump applications
- HVAC installations
- Mission-critical processes
- DC fast chargers

</table>

* Filter to be selected by system voltage and load (motor drive) power. Note: the harmonic filter will reduce the RMS input current. Example: the rated RMS input current of an unfiltered 400 V/15 kW/32 A drive will be reduced to approximately 23 A. Therefore, filter selection by current rating, as it is common for EMC/EMI filters, is not suitable.

** Calculated power loss at rated load power.

*** Please contact your local Schaffner partner to order the optional NEMA 1 covers with the order code in the table above.
Mechanical data

FN 3410-10 to -110

FN 3410-150 to -210
Installation. All filters from FN 3410-8 to -130 are wall mountable and have to be operated vertically. The filters FN 3410-150 and higher are designed for floor mounting. In order to allow for sufficient air flow all filters must be clear on top and bottom min. 150 mm.

Optional NEMA 1 cover. All filters can be optionally fitted with a NEMA 1 cover. Please find order codes on previous pages.
