Output Filter for Motor Drives

- Reduction of drive output voltage dv/dt
- Reduction of voltage stress at motor windings
- Protect AC motors from destructive effect of peak voltages
- Increase of motor service life
- Improvement of system reliability

**Technical specifications**

<table>

<td>UL 61800-5-1, CSA 22.2 No.14, EN 61558-2-20</td>
</tr>
</tbody>
</table>

**Features and benefits**

- Efficient reduction of high output voltage dv/dt from IGBT motor drives (as per IEC 60034-17/25)
- Restriction of overvoltages caused by line reflections on motor cables (as per IEC 60034-17/25)
- Protection of motor winding insulation from premature aging and destruction
- Increase service life of electric motors
- Patented solution without capacitors and resistors for ease of installation and increased reliability
- Less interference propagation towards neighbouring equipment or lines
- Output filter with low impedance, ideal for processes requiring exceptional precision and reproducibility of movements

**Approvals**

- UL recognized up to 320 A

**Typical applications**

- Motor drive applications with short to medium motor cable length
- Machinery comprising servo or torque motors
- Submersible- and irrigation pumps
- HVAC equipment, incl. pumps, fans and compressors
- Elevators, hoisting and cranes
- Motor drives for process lines
- Applications where sine wave filters are not suited (e.g. high dynamic operation)

**Typical electrical schematic**

* General purpose four-pole (1500 r/min) AC induction motor rated 690 V/50 Hz.
** Power loss at 2 kHz switching frequency/80 m motor cable length. Exact value depends upon the motor cable type and length, switching frequency and further stray parameters within the system.

Switching frequency vs. motor cable length

Ensure the motor drive switching frequency is set to the required switching frequency (see filter selection table). Check the drives manual whether special settings are necessary. For any questions please contact the drives manufacturer.

Refer also to the “fPWM/cable length” diagram below:

Temperature monitoring function

The temperature monitoring device opens a potential-free contact in the case of filter overtemperature (>180°C). The maximum switching capability is 5 A/240 V. The switch can be used, for example, in the input of a CNC controller or as the trip of a circuit breaker in order to interrupt the mains power supply.

All dimensions in mm; 1 inch = 25.4 mm

Tolerances according: ISO 2768-v/EN 22768-v, if not stated otherwise

Please note:
Make sure to consult and respect local, national and international safety codes.
Connect the protective earth terminal(s) first, before attempting to connect phase terminals.
Please consult the documents „Mounting and Installation Guidelines“ being shipped with the product.

For additional information please consult the document „Basis in EMC and Power Quality“, published in the download section of www.schaffner.com.
