\* At rated current and 400 VAC/50 Hz. The proper power selection depends upon the drive specification, the motor and the application requirements.

\*\* Losses calculated at 400 VAC/50 Hz and 3 kHz switching frequency.

## Temperature monitoring function

The temperature monitoring device opens a potential-free contact in the case of filter overtemperature (>180°C). The maximum switching capability is 5 A/240 V. **Important Note:** The switch **MUST** be used, for example, as an input of a logic controller (e.g. PLC, CNC etc.) or as the trip of a circuit breaker in order to interrupt the mains power supply.

## Required drives settings and grid considerations

Ensure the drive's switching frequency is set between the required minimum and maximum switching frequency.

The max. permissible motor drives DC link voltage is 850 VDC.

Check the drives manufacturer manual whether special settings are necessary. In any doubt contact the drives manufacturer.

**CAUTION:** If the Active Front End (AFE) motor drives or Active Infeed Converter (AIC) settings are not correct the filter may be damaged.
